and services to the corporate markets.**

Company

CybeRim brings a newer approach to the Value Added Distribution market by combining the supply of IT products and technologies with state of the art practices in support and services. The company is lead by a dynamic team of highly experienced personnel. The team at CybeRim boasts at least 50 man years of IT provisioning and support services experience in Europe.

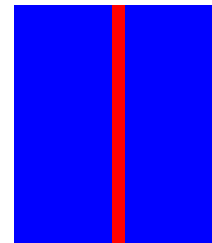

A carefully selected product range with maximum emphasis on technical brilliance ensures that our partners and customers are fully and properly supported with their ever changing IT needs. Regardless of the complexities of any corporate IT infrastructure, our technical experts will always go the extra mile to ease the pain of implementation.

Our business stretches well beyond the supply of productswe provide on site consultancy, on-demand security, full vulnerability management services, policy and compliance services, and branded technical support services.

Why Choose CybeRim?

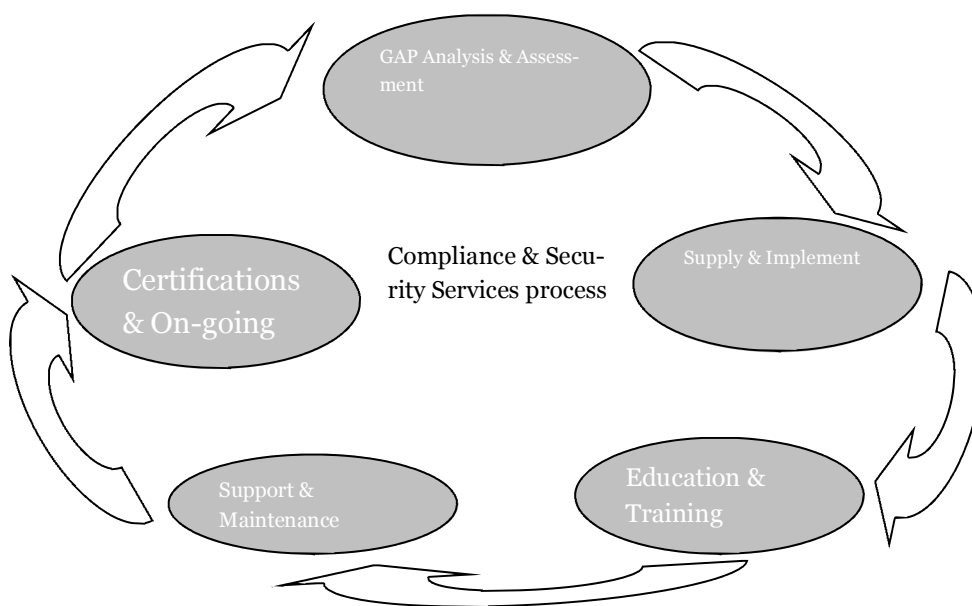

We have a successful track record in supporting customers FSA applications and audits, PCI -DSS assessments and various accreditation processes. We go the extra mile by providing assistance during the GAP analysis and audit, and assisting you with implementation of effective security technologies through out the organisation.

From supplying tried and tested security software and solutions, providing managed support for your existing security infrastructure, through to designing a complex end-to-end compliance program, CybeRim has the skills and the experience to support you with your information security and compliance objectives.

Compliance & Security Services

Governance, risk and compliance is an on-going process requiring continued monitoring of your network security posture....CybeRim is here to assist you.

CybeRim recognizes that decision makers find it challenging to take time out from business priorities to understand complex compliance changes and how this impacts technology, people, processes and premises. Our compliance and security services are designed to help organisations quickly achieve and maintain compliance. For many years the team at CybeRim have been successfully enabling customers to meet their regulatory compliance responsibilities and manage their information risks. Organisations from banks and building societies to retail and government have all benefited from our comprehensive range of compliance and security services, and the assurance that comes from our ISO27001 experience of management processes.

CybeRim's compliance and security services are proven to meet regulatory requirements and have enabled many organisations to simplify their audit processes, safeguard information assets, pursue new business initiatives and identify potential problems before they occur.

Compliance & Security Services

Consultancy & deployment

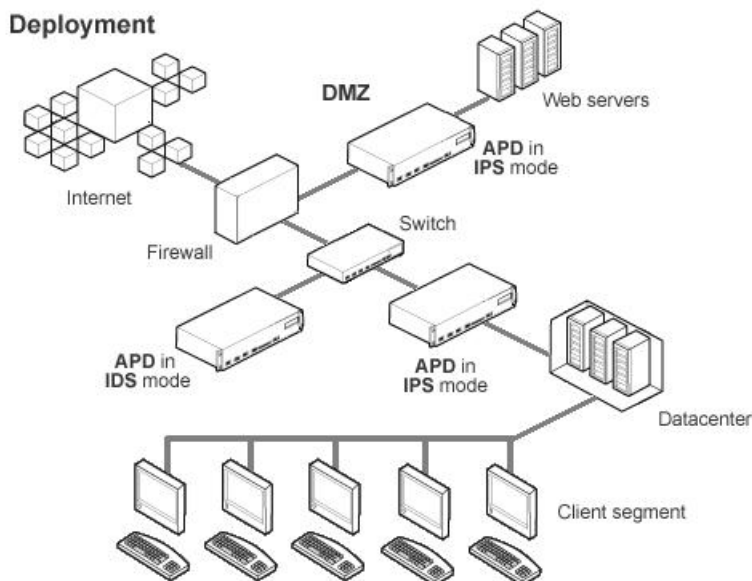

CybeRim offers a range of services to quickly and effectively enable organisations to address compliance and security. We know that it takes more than just technology to meet your requirements; it's as much about how it is deployed, operated and monitored.

Whether it's guiding you through your compliance programme or managing specific areas of security infrastructure, we can provide you with advice, knowledge and recommendations for best practice.

Our portfolio of carefully selected latest security solutions enables us to deliver the technology, processes and education that you need to remain secure and compliant.

CybeRim Services:

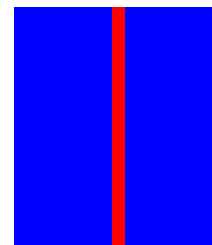

- Security Consultancy
- Complete installation and deployment
- Web penetration testing
- Compliance & Sec-
security assessment
- Security Awareness training
- On-demand penetration testing
- 24*7 post sales technical support

Achieving and maintaining compliance and security best practice can be very complex and often require specialist skills. Workloads can vary and depend on audit requirements, ranging from the initial implementation to the ongoing maintenance of policy and process. Having a flexible, specialist partner to support these tasks can offer a cost effective and practical approach to compliance.

Compliance & Security Services

Access control

When employees and partners require different levels of access to business critical systems, effective management of user profiles can be time consuming and complex. Controlling changes and maintaining appropriate levels of security is essential to limit IT risk and maintain business operations. Cyberim's services include:

- Managed Infrastructure Firewalls
- Managed Application Firewalls
- Secure Remote Access
- Web Filtering & Monitoring
- Strong Authentication
- Credential Management
- Identity & Access Management
- Group Policy Management
- Registers User Interface
- Security Zoned Network Infrastructure
- Secure Password change management

“you can count on CybeRim to deliver on time and on budget. CybeRim services allowed Tanaseybert to achieve PCI compliance on record time”, Marcelo Cabrera, CTO

Monitoring

- Log collection, event alerting & reporting
- Managed Intrusion Prevention Systems
- Managed wireless IPS
- System compliance & change detection

Communications security

With multiple forms of communication in play, monitoring the exchange of email, data and voice between employees and third parties has become an essential aspect of security and regulatory requirements. CybeRim's services include:

- Email & IM Filtering, Archive & e-Discovery
- Email Encryption
- Voice & Mobile Recording

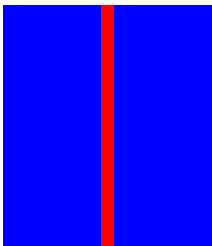

Endpoint security

Driven by the trend in workforce mobility, accessing the data from mobile devices brings with it the requirement to ensure critical information and hardware is secure both on and off the corporate network. CybeRim's Services include;

Hard Drive Encryption
Media & Port Security

Threat Management

- Anti-malware & host protection
- Vulnerability detection
- Vulnerability management
- Penetration testing
- Data Loss Prevention
- Secure configuration baseline

Key products & technologies

NETWORK WORLD: "We found GTB Inspector to be the only product to score a 100%, catching every single file we could send through it"

Data Loss Prevention

GTB Technologies has re-invented the enterprise data loss prevention marketplace; bringing a broad set of influential innovations such as content aware reverse firewall and finger printing and water marking.

GTB products provide unprecedented, real-time visibility and control of content – without performance degradation.

Frost & Sullivan cemented GTB's position as a leader by awarding GTB the "New product innovation award" for developing an innovative line of DLP products that address the key Data Loss Prevention industry challenges

IDS/IPS software with built in network asset detection. CounterSnipe offers some unique features

- Automated network profiling...knows what is to be protected
- Automated alert management...zero false alerts
- Automated asset discovery...finds and alerts on alien hosts
- Automated active scanning of new assets...reports on the risks presented by alien hosts.
- Automated, always-on, risk data updates...Continuous protection from thousands of current threats

Additionally CounterSnipe IDS/IPS provides and maintains a real time picture of your network, fine tunes itself to protecting that specific network and fulfils PCI-DSS compliance requirements.

"easiest to install and get running" SC Magazine

ObserveIT: Like a Security Camera on Your Servers!

ObserveIT and Cyberim work together to deliver enterprise-ready server monitoring solutions. ObserveIT software acts like a "security camera" on your servers, allowing you to see every action that takes place on your servers. With ObserveIT on your server environment, you can perform tasks such as:

- watch full video playback of any RDP, Citrix or VMWare sessions,
- view sessions in real time or from historical recordings,
- quickly find any user actions, without playing back the entire session.

Key products & technologies

Vulnerability Management Software

CybeRim supplies leading edge Vulnerability Management software with complete asset detection, PCI-Compliance templates, multiple OS and application signatures and integration with leading SEIMs.

The accuracy with which a vulnerability is identified directly effects the mitigating actions; CybeRim ensures that accuracy

Enterprise Password Management

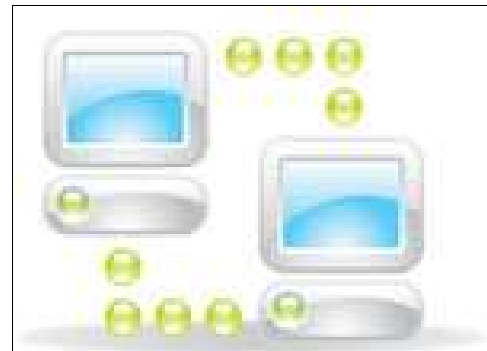

Manage and protect your organisation's most vulnerable secrets: your privileged passwords.

With CybeRim Server password management software, you and your colleagues can control access to critical enterprise passwords in one centralized, web-based repository. Our password management software offers permitted users secure access to passwords and other privileged information.

Phishing | Trojans | Pharming

These three areas are perceived as combining social engineering with the attacker's technical capabilities. Some of these attacks are "silent" and invisible to the user (such as Trojans and Pharming attacks); while others are "open" and conspicuous – aiming to trick the client into thinking that he has received genuine correspondence from the organisation he is accustomed to dealing with.

By using knowledge and technical tools, the attacker builds a (silent or conspicuous) attack intended for the general public, intending to perpetrate fraud affecting as many online users and online accounts as possible.

By implementing proprietary, state-of-the-art tools, VERASAFE provides a comprehensive, fail-safe solution that prevents the various types of online fraud and identity theft attacks in all three above-mentioned areas.
